

Preparing Your Center to Open After COVID-19

1. All centers should receive a thorough cleaning following the COVID-19 pandemic.
2. There will most likely be new standards and new technology for cleaning and I will share when information is made available.
3. Screening protocols should be continued for healthcare workers, patients and visitors.
4. Proper Hand Hygiene will be the first defense in preventing cyclical occurrences of COVID-19.
5. Your center will need to replenish the PPE supply and be sure there is enough for proper handling of patients and procedures.
6. I anticipate new employee training to better prepare your center should this happen again.
7. Any healthcare workers on your team should remain home if feeling ill or having a fever.
8. Telemedicine will likely be the norm for a while and getting your center set up will be beneficial to staff and patients.
